

Hands-on Recommender System Experiments with MyMediaLite

Zeno Gantner
zeno.gantner@nokia.com

Nokia gate5 GmbH, Berlin

13 September 2012

MyMediaLite Recommendation Algorithm Library

Major features:

- ▶ **scalable** implementations of many state-of-the-art recommendation methods – *tested on up to 700M events*
- ▶ evaluation framework for **reproducible** research
- ▶ **ready to be used**: command line tools, not programming necessary

MyMediaLite

- ▶ rating prediction
- ▶ item recommendation
- ▶ group recommendation

features

- ▶ **command-line tools**
- ▶ evaluation framework
- ▶ usable from C#, Python, Ruby, F#
- ▶ Java ports available

development

- ▶ written in C#, runs on Mono
- ▶ regular releases (ca. 1 every 2 months)

- ▶ simple
- ▶ free
- ▶ scalable
- ▶ well-documented
- ▶ well-tested
- ▶ choice

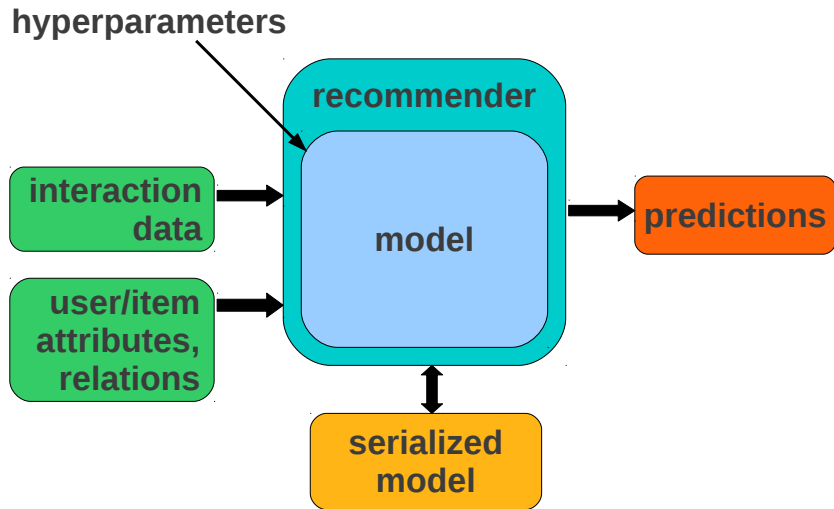

<http://ismll.de/mymedialite>

Methods in MyMediaLite

State-of-the-art recommendation methods in MyMediaLite:

- ▶ *kNN* variants
- ▶ *Online-Updating Regularized Kernel Matrix Factorization* [Rendle and Schmidt-Thieme, RecSys 2009]
- ▶ *SocialMF* [Jamali and Ester, RecSys 2010]
- ▶ *Asymmetric Factor Models (AFM)* [Paterek, KDD Cup 2007]
- ▶ *SVD++* [Koren, KDD 2008]
- ▶ *Weighted Regularized Matrix Factorization (WR-MF)* [Hu and Koren, ICDM 2008], [Pan et al., ICDM 2008]
- ▶ *BPR-MF* [Rendle et al., UAI 2009]

Simplified Architecture

File Format: MovieLens

user ID	item ID	rating	timestamp
196	242	3	881250949
186	302	3	891717742
22	377	1	878887116
244	51	2	880606923

Remarks

- ▶ user and item IDs can be (almost) arbitrary strings
- ▶ separator: whitespace, tab, comma, ::
- ▶ alternative date/time format: yyyy-mm-dd
- ▶ rating and date/time fields are optional
- ▶ import script; Unix tools, Perl, Python ...

Explicit Feedback

★★★★★ = Must See
★★★★☆ = Will Enjoy
★★★☆☆ = It's OK
★★☆☆☆ = Fairly Bad
★☆☆☆☆ = Awful

Getting Help: Usage Information

```
rating_prediction --help
```

Data

```
rating_prediction --training-file=u1.base --test-file=u1.test
```

Recommender Options

```
rating_prediction --training-file=u.data --test-ratio=0.2
```

Fixing the Random Seed

```
rating_prediction ... --random-seed=1
```

Choosing a Recommender

```
rating_prediction ... --recommender=UserAverage
```

Choosing a Recommender

```
rating_prediction ... --recommender=UserItemBaseline
```

Iterative Recommenders

```
rating_prediction  
... --recommender=BiasedMatrixFactorization  
    --find-iter=1 --max-iter=30
```

Recommender Options (Hyperparameters)

```
rating_prediction  
... --recommender-options=" num_factors=5"
```

Recommender Options (Hyperparameters)

rating_prediction

```
... --recommender-options=" num_factors=5 reg=0.05"
```

SVD++

```
rating_prediction ... --recommender=SVDPlusPlus  
--recommender-options=" num_factors=5 reg=0.1  
learn_rate=0.01"
```

Personalized Item Recommendation

amazon.de

Hallo, **Zeno Gantner**. Wir haben [Empfehlungen](#) für Sie. ([Ausloggen](#))

Implicit Feedback

Behavior that is not an immediate expression of preference

- ▶ views
- ▶ clicks
- ▶ purchases

Advantages over explicit feedback:

- ▶ easy to collect
- ▶ available in abundance

positive-only feedback

Item Recommendation Tool: Very Similar Usage

```
item_recommendation --training-file=u.data  
--test-ratio=0.2
```

Item Recommendation Tool

```
item_recommendation . . . --recommender=UserKNN
```

Choosing a Different Correlation/Similarity

```
item_recommendation  
... --recommender-options=" correlation=Jaccard"
```

Option Shortcuts

item_recommendation

```
...--recommender-options=" cor=Cosine w=true q=1.5"
```

Iterative Recommenders / Save Predictions to Disk

```
item_recommendation . . . --recommender=WRMF  
--find-iter=1 --max-iter=10 --prediction-file=pred.txt
```

Left out from this presentation

- ▶ parallelization
- ▶ `--cross-validation=K` `--chronological-split=2012-01-01`
- ▶ limiting the test users/candidate items
- ▶ attribute- and relation-aware recommenders
- ▶ user-to-item recommendation
- ▶ top-n evaluation of rating predictors: `rating_based_ranking`
- ▶ `--online-evaluation`
- ▶ `--repeated-items`
- ▶ `--save-model=FILE` `--load-model=FILE`
- ▶ `--cutoff=1.05` `--measure=RMSE` `--epsilon=0.001`
- ▶ tricks to save memory, e.g. `--no-id-mapping` `--rating-type=byte`
- ▶ ...

Instead of a Conclusion: 2-Hour Projects

Parallel processing

- ▶ similarity computation
- ▶ BPR matrix factorization

Correlations

- ▶ Dice, Tyversky
- ▶ Jaccard index for $\{1, -1, ?\}$

Algorithms

- ▶ SGD learning for WRMF
- ▶ ALS learning for MF
- ▶ *your favorite algorithm*

Evaluation

- ▶ expected reciprocal rank (ERR)
- ▶ Kendall's Tau; Spearman
